

4 Channel Gliderol - CLONE

CODE TYPE

Smart button technology - each with pre-programmed buttons.

CHANNELS

4 available channels per programmed transmitter (all with smart button technology)

KIT CONTAINS

- 1 x transmitter
- 1 x 12 Volt Alkaline battery

DESCRIPTION

This four channel keyring transmitter is a light weight transmitter that is small enough to fit on your car keyring.

The four channels allow for use on multiple garage doors.

Please Note:

The left one, for example is your original remote such as the Gliderol TM305-C, the right one is our cloner, as you can see, the cloner's side is covered by metal, and there is also a metal plate in front of keyfobs, so the only side that is non metal is the back side. This is why we put the back side straight to the original keyfob's antenna position, and in this case, we have recorded the highest successful rate.

HOW TO

HOW TO CLONE GLIDEROL REMOTE

Step 1: Clear the history from new remote

1. Press and hold both buttons 1 and 2 until the LED flashes 3 times.
2. Release button 2 while keeping 1 down and slowly press button 2 three (3) times until the LED flashes.
3. Release button 1 to finish clearing the history.

Step 2: Clone code from original transmitter

1. Keep both the original and new remote as close as possible for cloning.
2. Press and hold button 1 on the original transmitter and then press and hold button 1 on the new remote until you see the LED of the new remote flash.
3. Release both buttons to finish the cloning process.
4. Repeat steps 1 - 3 to clone other buttons.

HOW TO ERASE TRANSMITTER CODES

Press and hold the CODE button for 12 seconds.

NOTE: This will erase all codes from the memory.
